

DX FT8 Project Firmware Version 1.9.1 Release Notes: 20 February 2025

This version of the firmware was written to make two changes:

- 1) Display Blanking has been added. To BLANK the Display, touch the very Upper Right Hand Corner of the Display. To turn the Display back On, touch anywhere on the screen. This reduces the current draw by about 100 MADC. Please see the graphic below.
- 2) The Audio DSP Algorithms have been modified to improve Unwanted Side Band Suppression.
- 3) The Firmware is now being provided as a HEX File to make installation via ST Link easier.
